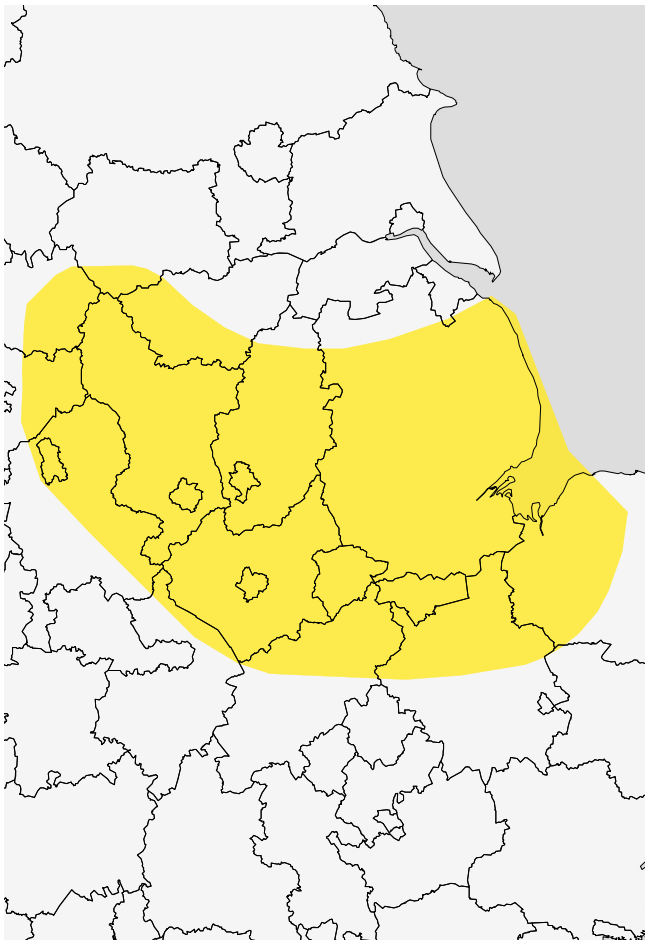
Yellow warning
Snow

Between
13:33 Fri 4 Dec 2020 and
21:00 Fri 4 Dec 2020



A mixture of rain, sleet, and snow will remain slow moving over the next few hours, causing tricky driving conditions

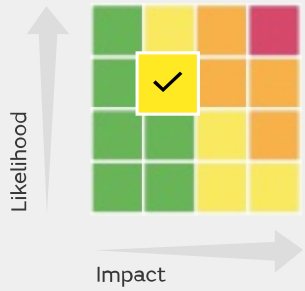
What to expect

- Some roads and railways likely to be affected with longer journey times by road, bus and train services
- Increased likelihood of traffic collisions due to tricky driving conditions.

Further details

The area of precipitation currently across this region is expected to be slow moving, with snow falling across higher routes (above 300 m), and potential for heavier bursts to bring temporary lying snow down to around 100 m above sea level. Accumulations are not expected to amount to more than a a few centimetres, and will often be transient.

As the precipitation eases later today, and warm air becomes increasingly mixed in, any wintry element will eventually become confined to the highest ground this evening, where impacts are less likely.



Medium likelihood of low impacts

Issued at 13:33 Fri 4 Dec, 2020
